[Virus System Info V1.0 Utorrent](#)

The screenshot shows the 'System Repair' application window. The title bar reads 'System Repair'. The main menu includes 'System Status', 'Diagnostics', 'Repair', 'Settings & Options', and 'Help & Support'. The central area displays a 'PC Performance & Stability analysis report' with a red banner indicating '11 errors detected!'. Below this, a table lists the errors:

Error report	Type
⚠ Drive C: initializing error	Warning
⊗ Bad sectors on hard drive or damaged file allocation table - Critical Error	Critical
⊗ Read time of hard drive clusters less than 500 ms - Critical Error	Critical
⚠ A problem detected while reading boot operating system files	Warning
⊗ Hard drive doesn't respond to system commands - Critical Error	Critical

At the bottom of the error list, it states 'Errors correction should be performed.' and provides a 'Fix Errors' button. On the right side, there are three module status cards: 'Scanner Module v1.0.1 updt: 12.07.2011' (green checkmark), 'Standard Module v1.2.4 updt: 12.07.2011' (green checkmark), and 'Advanced Module activate' (red X). The bottom status bar shows 'WORKGROUP', 'Memory: 1023 MB', and 'Processor: AMD Athlon(tm) II X2 215...'.
